

Comprehensive Care Planning

Comprehensive Care Plan Children with Special Health Care Needs

This folder contains information about the essentials of comprehensive care planning for children with special health care needs (CSHCN). Three distinct types of documents (present medical information plans, emergency plans, and working (action) care plans. When combined appropriately for CSHCN (based upon need), these tools make up a comprehensive care plan. A few of the care plan examples offer a combination of the three types of care plans (ie. an emergency plan and a medical information plan). These combined care plans are marked with an asterisk and will appear in both folders.

Table of Contents

Introduction to Essential Care Plan Components- the Comprehensive Care Plan

Section One: Medical Information Care Plans

- Medical Summary EPIC-IC PA
- Gifford Medical Care Plan
- CMHI Chronic Conditions Management Plan*
- Hitchcock Clinic Pediatric Care Plan*

- Emergency Care Plan (Blank Form)
- Hitchcock Clinic Pediatric Care Plan*

Section Three: Working (Action) Care Plans

- CMHI Chronic Conditions Management Plan*
- Actionable Care Plan
- Nashaway Pediatrics Care Plan

Introduction to Essential Care Plan Components-

The Comprehensive Care Plan

The Comprehensive Care Plan: Medical Summary, Emergency Treatment Plan and Working Care Plan For Children with Special Health Care Needs

Children with special health care needs, their families, physicians, practice teams and community providers will benefit from having a clear, written medical summary, emergency treatment plan and plan of care. These components can be combined or developed separately. When combined the Medical Summary, Emergency Treatment Plan and Working Care Plan are the components of a Comprehensive Care Plan. The medical summaries, emergency treatment and care plans can be on paper, disk or if possible web-based. There are multiple purposes of the medical summary/care plans. These include:

- An available source of information for parents to provide to the medical, educational and other care teams,
- A quick reference with child-specific information in a medical emergency,
- An action plan that the entire care team, including the family and patient develop, use to prioritize, assign tasks, implement and assess care.

In the beginning remember that your practice team will decide who needs a medical summary or an emergency care plan depending on the complexity of the condition. The summary and/or emergency treatment plan will take some time to develop in the beginning, but the family, the clinicians and the community providers will find them very helpful. Your parent partners will be a great resource here with family friendly language.

The working care plan is a written framework combining the goals of the patient/family/team with the treatment plan. It is best to keep it simple at the start. Remember to start small with little steps. The Center for Medical Home Improvement Actionable Care Plan (working care plan) is a practical tool to get you started.

The major components of the comprehensive care plan include a medical summary with an emergency treatment plan and a working care plan:

- 1. **The Medical Summary:** The child's medical summary contains a short synopsis of the child's current diagnosis, problem list, treatment including medications and recurrent problems, past medical history and community based care. The specific components of the medical summary include:
 - Identifying and family contact (including emergency contact) information
 - Allergies and Medications
 - Diagnosis and Active Problem List (including critical equipment)
 - Consultants--Specialist and their contact information
 - Transport/Equipment Needs
 - Past History (Summary)
 - Review of Systems (Degree of current involvement)

- Coverage Concerns/Recurrent Problems
- Community Providers/Agencies
- Hospitalizations
- Assets and challenges unique to the individual child
- Other information the family wants caregivers to know about their child

Examples are available online at the AAP Medical Home website, the Center for Medical Home Improvement website, the PACC website (see links for these on the extranet), NICHQ Medical Home website, the EPIC-IC website and others.

- 2. The Emergency Treatment Plan: The medical summary can include information for emergency treatment and in many instances can serve as both the summary and the emergency plan. However, some parents and practices may want a separate Emergency Treatment Plan. The child with multiple, complex conditions and/or recurrent life threatening events may need an emergency treatment plan in addition to or in place of the medical summary. The AAP / ACEP emergency treatment plans are very similar to the medical summary and it would be duplicative to fill out both. The Emergency Treatment Plans do have more baseline physical/lab data. The AAP and the ACEP have approved them. The form is available on the AAP web site with links from the NICHQ website and others. (Some teams have found it helpful to use a medical summary and check of a box indicating an attached emergency plan).
- 3. **The Working Care Plan:** A care plan for a child with special health care needs can be as simple as a written, organized note developed during a visit, a more detailed plan of care developed during a meeting of the family, care coordinator and clinician or a comprehensive, integrated care plan developed by the child/family's multidisciplinary team. This plan helps direct the role/focus of the practice-based care coordinator. The critical components of the care plan include:
 - A prioritized list of main concerns/goals with
 - The current clinical/educational/social information pertinent to the concern/goal.
 - The current plan/intervention for that concern/goal
 - The person(s) responsible for that intervention
 - The due date for the intervention.

The working or action care plans are available on the NICHQ Medical Home web site, the AAP Medical Home web site and others.

<u>Note:</u> Some care planning examples combine two or more of the three components in the document. When this is the case an * indicates so in the table of contents for that documents.
